

# EXPERT WITNESS AND DISPUTE SUPPORT

---

## OVERVIEW

Our clients in the legal community include some of the world's largest domestic and international law firms.

In performing dispute resolution work, our consultants have advised legal teams on a wide range of technical and economic issues across the hydrocarbon processing industries. This has often included discovery requests and preparation of deposition questions. We have performed damage calculations, standard of care analyses, and normal industry practice analyses for our clients. Our analyses and conclusions have been presented at court proceedings where our expert testimony has been relied upon by judges, juries, and arbitrators.

We would welcome the opportunity to discuss our qualifications in more detail as they may relate to a specific area in the industry that is under review or may be the focus of parties in dispute.

## SERVICES IN THE LEGAL FIELD
