INSIDE THE BOX

Before you hire an expert, get the facts.

Your vehicle's **Black Box** contains critical information you can use to evaluate your case. This data is often lost as vehicles are sold or scrapped. Secure your data early and hire a reconstructionist later.

Vehicular Black Box Data Retrieval

Pre-Crash Data typically provides 5 seconds of data such as:
1. Speed
2. Brake usage
3. Steering Data
4. Seat belt usage

Crash Pulse Data provides information about the impact itself. Speed and acceleration time histories provide insight into the severity of the impact.

The airbag does NOT need to deploy for infomation to be stored.

Information is still available, even AFTER the vehicle is repaired.

Rear-end, frontal, sideswipe and low-speed crashes are recorded.

Secure servers maintain data integrity.
Photography and measurement services.
Optional data summary report is available.
